

The hotel, because of its strategic location on the outer edge of the area and from the point of view of its urban backdrop, offers a bolder design which is intended to make it a landmark building that redraws the urban landscape.

The rounded form of the hotel means that the number of dwellings with neighbours immediately opposite to the front can be minimised because of the limited straight lines of the building. The transparency and lightness of the ground floor are ideal for commercial outlets that open onto the square. Upper floors are arranged radially and developed around a central plaza and vertical flows. This radial pattern allows a dynamic alignment of the flats, which open outwards onto the external frontage.

JALA HOTEL Liège construction of a hotel

Tractebel Development Engineering
above ground 5 100 m²
basement 2 380 m²
construction 2009-2010
construction cost € 11.500.0000

credits : G. De Kinder
